Immunization Review for High School Students, College Students, Volunteers in Maternity Areas and the Emergency Room

Everyone serving at OhioHealth is responsible for keeping the patients in our care safe. This means that all OhioHealth volunteers must meet certain health requirements to prevent spreading communicable diseases and provide safe care. This is particularly true for volunteers serving in our women's health, pediatrics, and emergency areas. Certain vaccines are required for volunteers serving in these high-risk areas.

In addition to TB testing and your annual flu vaccine, all high school and college students and volunteers serving in maternity areas and the emergency department must provide documentation on the following immunizations:

1. MMR (Required)
 - Written documentation of 2 MMR vaccines given 28 days apart OR
 - Lab results indicating immunity to rubeola, mumps, and rubella (all three tests are required)

2. Varicella – Chickenpox (Required)
 - Written documentation of 2 Varicella vaccines given 28 days apart OR
 - Lab results indicating immunity to varicella

3. Hepatitis B (Strongly Recommended)
 - Written evidence of up to 6 vaccines with lab result indicating immunity

4. Tdap (One Dose for Adults Strongly Recommended)
 - Written documentation of one Tdap vaccine since the age of 18

We ask that documentation of your vaccines from your physician's office be provided by attaching a copy to your application. If you are not able to provide the above documentation, please contact Associate Health and Wellness. You will not be able to attend New Volunteer Orientation until documentation of immunizations is approved by Associate Health.

Once this documentation has been received, a nurse will review it. The nurse will contact you to let you know whether additional lab testing or immunizations are needed.
